

How to Measure Your Square/Rectangular Fire Pit

Before you order your cover, you will need to carefully measure the fire pit it is meant to cover. Our guide below will walk you through the steps to correctly and accurately measure your fire pit to ensure you get the best fit.

Width

Measure the widest side of the fire pit from left to right.

*Start measurement at the table top or leg base, whichever is the widest point.

Depth

Measure side to side across top-center of the fire pit, adjacent from width.

*Start measurement at the table top or leg base, whichever is the deepest point.

Height

Measure from the ground to the top of the fire pit.

*We recommend a cover 1-2 inches shorter than the furniture for breathability.

Please round up your dimensions to the nearest inch.

Please note: Published dimensions for patio furniture cover styles refer to furniture dimensions

Additional Tips

Each cover is intuitively designed to allow for hem-to-ground space for necessary air circulation

If no fire pit cover with your dimensions exists, choose one that is slightly larger in width or depth

We also offer Fire Pit Top Covers that are designed for convenience and moderate protection
